**ABSTRACT**

**Background :** Cyberbullying is any form of violence experienced by children or adolescents and carried out by their peers through the cyber world or the internet. Cyberbullying can have an impact on the emotions and psychology of adolescents. The perpetrator will always feel safe if the cyberbullying behavior is not followed up by the school.

**Research Objective :** To identify the perpetrators, victims and perpetrators or victims of cyberbullying on social media in junior high school students in Banjarmasin City.

**Methods :** This type of research is quantitative research and uses a descriptive design with 393 respondents of junior high school students in Banjarmasin City. Sampling using convenience sampling technique, the research measuring instrument used a questionnaire of 10 statements. Data analysis using SPSS version 25.

**Results :** Junior high school adolescents in Banjarmasin City who acted as perpetrators and victims of cyberbullying were (68.7%), not victims of cyberbullying were (55.7%), not perpetrators of cyberbullying were (54.2%), and those who did not do cyberbullying were (54.2%).

**Conclusion :** The results of this study can be concluded that cyberbullying behavior on social media in adolescents is mostly not perpetrators and victims of cyberbullying (68.7%) and the least perpetrators and victims (31.3%). The results can be concluded that the number of cyberbullying behavior in junior high school adolescents in Banjarmasin City is mostly not perpetrators and victims as many as (68.7%), not victims of cyberbullying as many as (55.7%), not perpetrators of cyberbullying as many as (54.2%), and who do not do cyberbullying as many as (54.2%).
